Cistagram (cntd.)

Design Addition: Add Followers

Q0. Create copy-constructor for Photo object. Use it when creating copying photo for making post.

Q1. One user can follow some other user, identified by username. One user is allowed to have maximum of 10 followers.

Q2. One user has an array of “feeds”, which are pointers to Post objects. When a user being followed makes a post, the feeds array of the follower gets added with a pointer of the new post as a feed. Similarly, deletion of original post should make sure there is dangling pointer remaining in the feeds array. You can assume 100 as the max number of feeds.

Note: use #define for the constants
